OBJECTIVE:

Frontend-leaning full-stack engineer specializing with hands-on fluency in AI-assisted development

EDUCATION:

San José State University, Computer Science Department, San José, CA

B.S. degree in Computer Science, Magna Cum Laude

Graduated May 2024

TECHNICAL SKILLS:

Core Technologies: TypeScript, JavaScript, React, Next.js, Node.js, Python, Java

Frontend & UI: React, Next.js, Angular, TailwindCSS, Storybook, shadcn/ui, HTML, CSS

Backend & Data: MongoDB, MySQL, Firebase, Express.js, tRPC, DrizzleORM

Devops & AI: Git, GitHub Actions, Docker, GCP (Cloud Run, Cloud Build), pnpm, Turborepo, Vite Claude Code

Additional: Angular, Notion, Slack

PROFESSIONAL EXPERIENCE:

Exxact Corporation | Software Engineering Intern

April 2025 – June 2026 | Fremont, CA

- Led four-phase consolidation of two fragmented component packages into the unified exxcom-ui design system — 100+ production components reorganized into an Atomic Design taxonomy with CSS-variable-driven multi-theme architecture serving two storefronts
- Engineered a MongoDB caching layer for Contentstack CMS with webhook-based invalidation on publish events, cutting API usage on 10 high-traffic pages from 100K+ calls per page per week to near zero — bringing it under 5M-call limit (from 6M+) without a paid plan increase, and keeping pages online during CMS outages
- Bootstrapped CI/CD from zero across a 39-repository monorepo: custom Node.js path-based change detection, semantic-release automation, and GCP Workload Identity Federation for keyless deploys
- Designed multi-layer bot and LLM-agent detection for contact forms — behavioral keystroke scoring, navigator.webdriver fingerprinting, honeypot — blocking Playwright, browser-use, and Stagehand agents with zero false positives
- Led WCAG 2.1 AA accessibility initiative across 15+ components (focus design tokens, ARIA attributes, keyboard navigation)
- Rewrote a Cloud Run blog redirect microservice suffering connection-pool exhaustion
- Among first engineers on the team to adopt **Claude Code**

ADDITIONAL INFORMATION:

-
- **Methodologies:** Agile, CI/CD, DevOps, Atomic Design, Component-Driven Development
 - **Soft Skills:** Cross-functional Collaboration, Technical Documentation, Code Review, Independent Problem Solving
